

HOW TO PROMOTE OR BROADCAST A PUBLISHED PAPER

We do not think it is necessary to remind authors of the importance of citations in improving their H index. Therefore, once the article is published along with its identifying DOI, it is vital to circulate it to facilitate its knowledge and citation by other research colleagues. It is important to point out that research does not end when it has been published, but that another equally important phase of dissemination begins.

WHAT PUBLICACIONES DYNA DOES:

- Open access option of the article facilitates its reading and citation for maximum visibility.
- Even if you do not use the open access option, DYNA provides authors with an open link that they can share on their corporate or personal website or on social networks: twitter, researchgate,...
- Indexing of paper and its metadata in scientific databases: Web of Science, Scopus, Fecyt,... increases its readability and enhances its citation.
- Likewise, sharing of metadata through other collaborating organizations such as Crossref, ORCID...facilitates the unequivocal identification of the paper, author and research dissemination.
- Editors and referees who have been involved in the review process, are notified as soon as the paper is published by sending them an access link to the paper in its final format.
- Subscribers receive the published journal. In addition, they have a configurable alert service that allows them to be notified when an paper from a discipline of their interest has been published..
- Publicaciones DYNA's web search engine allows a quick and easy location of papers published since 1936 in all its journals (search by date, keywords, UNESCO discipline, free text...)
- Web profile of each published paper, has enabled functions to comment or disseminate the research in a simple and fast way through multiple social platforms or by email. Different citation formats are also provided for that paper (ISO690, APA, MLA...)

WHAT AUTHOR CAN DO:

1. Share your paper through Social Networks (Twitter, Facebook, Linkedin, Researchgate, Academia.edu...) with your contacts or potential stakeholders in the published research.
2. Update the profiles in these social networks, adding the link to your paper and a brief description of it.
3. Share your paper link with colleagues in its field of research
4. Add your paper link in email signature.
5. Send us the DOI of your paper along with a text of up to 117 characters to publish on social networks DYNA to dyna@revistadyna.com putting in the subject "to disseminate on DYNA social networks"
6. Sign up in ORCID (if you have not already done so) and update your profile by adding the published paper.
7. Spread your paper in conferences through presentations or posters.

8. Create a video with a brief presentation about your paper to use it in your youtube.com channel or in DYNA's channel
9. Ask your organization to publicize your publication on its social networks.
10. Include your paper as a reference on Wikipedia in an appropriate topic
